Template Manual

Ocularus HTML - ver 2.0

Thank You :)

Thanks for purchasing template and for supporting our work. Ocularus is our new fancy template. Responsive, clean and professional look with sleek design will satisfy all your needs.

You will need basic HTML, CSS, jQuery skills to edit Ocularus HTML. We will try to help you out with this documentation.

HTML Structure

Ocularus consist several HTML files

- index.html - Home page
- about.html
- blog.html
- portfolio.html
- team.html
- contact.html
- single.html
- single-portfolio.html

Home Page index.html

On Home section is placed image carousel which is placed in right part of screen. Html code for slider looks like this:

```html
<div class="slider-wrapper">
    <div class="carousel-slider">
        <div class="carousel">
            <div class="carousel-cell">
                <img src="images/img_01.jpg" alt="" />
                <p class="post-num">05</p>
                <h3 class="entry-title"><a href="single.html">Another Day at Work</a></h3>
                <p class="cat-links">Office</p>
            </div>
            <div class="carousel-cell">
                <img src="images/animation.gif" alt="" />
                <p class="post-num">04</p>
                <h3 class="entry-title"><a href="single.html">Another Day at Work</a></h3>
                <p class="cat-links">Office</p>
            </div>
            <div class="carousel-cell">
                <img src="images/img_03.jpg" alt="" />
                <p class="post-num">03</p>
                <h3 class="entry-title"><a href="single.html">Another Day at Work</a></h3>
                <p class="cat-links">Office</p>
            </div>
        </div>
    </div>
</div>
```

Configuration code (JS) is placed in js/main.js file and it looks like this:

```javascript
//Home Carousel Slider

jQuery(".carousel-slider .carousel").each(function () {

    jQuery(this).flickity({

        contain: true,

        freeScroll: true,

        cellAlign: 'left',

        pageDots: false

    });

});
```

Portfolio Page

On Portfolio page you will find code for category filtering:

```
<div class="category-filter-list button-group filters-button-group">
        <div class="button is-checked" data-filter="*">All</div>
        <div class="button" data-filter=".interior">Interior</div>
        <div class="button" data-filter=".abstract">Abstract</div>
        <div class="button" data-filter=".industry">Industry</div>
    </div>
```

First filter value is "All" and it is important to set **data-filter="*"** to show all items. For all other categories, the **data-filter** has a class name as value. This class should be also included in html code for portfolio item, like this:

```
<div class="grid-item element-item p_one_third interior">
```

This mean, this item will be visible when you select **interior** in category filter. You can place one item in two or more categories, just add class like this:

```
<div class="grid-item element-item p_one_third interior abstract super-mario">
```

Alos, important class is **p_one_third** - if item has this class, it will be **33.333%** with. There are also **p_two_third** class for **66.666%** width and class **p_one** for **100%** width element.

A whole code, for one item, which is placed in category **interior** and it is **66.666%** width, looks like this:

```html
<div class="grid-item element-item p_two_third interior">
    <a href="single-portfolio.html">
        <img src="images/portfolio_img_04.jpg" alt="" />
        <div class="portfolio-text-holder">
            <p class="portfolio-text">Smartphone</p>
            <p class="portfolio-cat">Interior</p>
        </div>
    </a>
</div>
```

Footer Social Icons

In footer (which is placed in sidebar menu) you will find this code for social icons:

```html
<p class="footer-social">
        <a href="#"><span class="fa fa-facebook"></span></a>
        <a href="#"><span class="fa fa-twitter"></span></a>
        <a href="#"><span class="fa fa-behance"></span></a>
    </p>
```

As you see, there are fontawesome icons. You can change it with any other image from here http://fontawesome.io/

Mail Configuration

Note: Do not remove any quote or double quote signs while doing this.

One notice: this will be functional only on your server, php file can not be executed on your local computer.

Just add your own email address here in your config.php file.

```
//SITE GLOBAL CONFIGURATION
$email = "your@email.here"; //<-- Your email
```
